

Technical Requirements:

1. Front End Requirements:

- User Friendly interface.
- Responsive for all the devices of every screensize i.e Mobile Tablets, Laptops. Desktop etc.
- Essential pages like Login/Signup , Home(Landing Page), Products, Product Listing , Product Details , Category Page , Add to cart Page , Checkout Page must be included.

2. Backend Requirements:

- Sanity will act as a Database for my marketplace sd it stores my content and manage the content. It will include the content like
 - I. Products
 - II. Product Listing
 - III. Orders
 - IV. Customers data
 - V. Checkout info
- Authjs will be require for authentication purpose as when user first interact with marketplace he/she will surely interact with login/signup options so the first time user will signup and provide his/her credentials which will then store IN SANITY.

3. Third Party APIs:

- **Shipment API:**

Will surely integrate shipment api for shipment and tracking its status . Most commonly use shipengine , shippo etc so we will use one of them.

- **Payment:**

We will be Using payment gateways for payments methods in our marketplace.
